

# WIKI FOR LAB 2

## Lab 2 Assignment:

### Question:

Create Wireframes and a web application with at least 3 pages:

Create 2 buttons login, register

On clicking register button, page needs to transition to register page.

On clicking login, it navigates to home page.

Home Page: Home page should use external web service to mark Start and End Points using Google Map Web Services and also display the weather details for both the places. Location should autocomplete feature for input.

### Screen Shots:

### Wire Frames:
